

ESPON TIPSE – ESPON Applied Research 2013/1/24

Social exclusion mapping: Main findings, methods used and policy implications by Gergely Tagai, HAS

> Stockholm 25 November 2014

EUROPEAN UNION Part-financed by the European Regional Development Fund INVESTING IN YOUR FUTURE

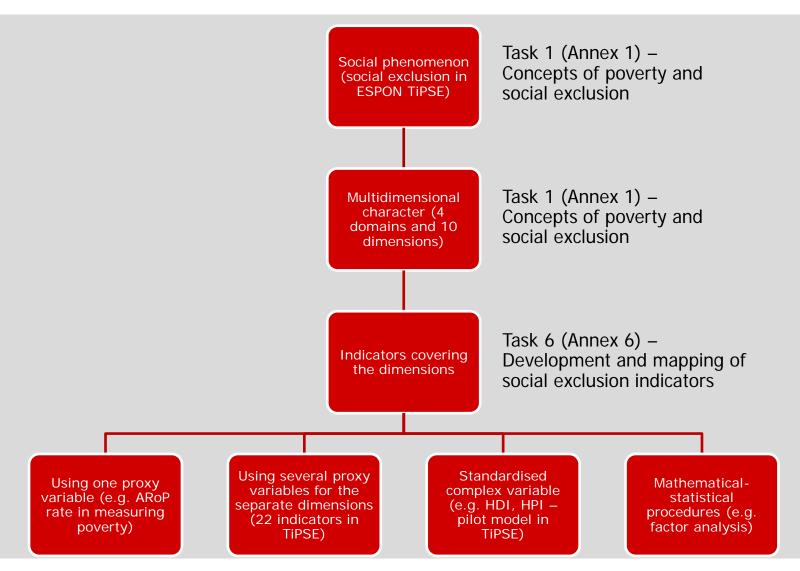

Analysis of social exclusion in the TiPSE project

- Main goal: improve the evidence base on social exclusion for policy – better targeting (of interventions) by knowing regional or local concentrations and trends of vulnerabilities to social exclusion
- Identifying macro and micro-scale patterns of social exclusion across the ESPON space
- Establishing an explicit link to the operational definition of social exclusion – links to Task 1 (Concepts of poverty and social exclusion)
- Development of indicators on the basis of the regional database generated in Task 3
- Analysis of social exclusion patterns findings as the evidence base for policy implications (Task 10) and for monitoring proposals (Task 11)

Operationalising social exclusion

Selection of indicators

Domains	Dimensions	Number of indicators (2001)	Number of indicators (2011)						
Earning a living	Income earned by tax payers	2	2						
	Employment	27	4						
Access to basic	Health	3	3						
services	Education	2	2						
	Housing	6	3						
Social environment	Age	3	3						
	Ethnic composition	1	1						
	Immigrants	1	1						
	Household structure	4	2						
Political participation	Citizenship	1	1						

- Aspects of analysis (selecting and using indicators)
 - Coverage availability of data
 - Harmonization definitional standardization
 - Discrimination degree of geographical variation
 - Interpretation reasonable patterns
 - NUTS level NUTS3 as optimum level
 - RELEVANCE meaningful in analysing social exclusion

Analysis of social exclusion

- Macro-regional analysis (regional zooms)
 - Using local knowledge of experts (TiPSE partners)
 - Identifying various geographies of social exclusion
- Cross-European analysis
 - Identifying cross-European patterns
 - Collating macro-regional findings
- Synthesis of patterns
 - Differences between macro-regions and countries
 - Urban Rural disparities
 - Different patterns of peripherality
 - Place specific patterns of risks of exclusion

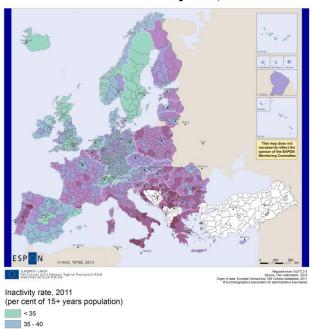

Social exclusion domains and patterns

Earning a living – macro-regional differences

Access to basic services – urbanrural, core-periphery differences

Economic inactivity rate, 2011

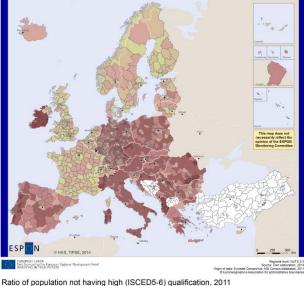

No data

BE, EL, ES53, ES70 and NL are shown at NUTS2 level

n for DK, ES, UK is 16+ popi rel for UKM UKN 16-74 room

Ratio of population not having high qualification, 2011

(per cent of 25+ years population)

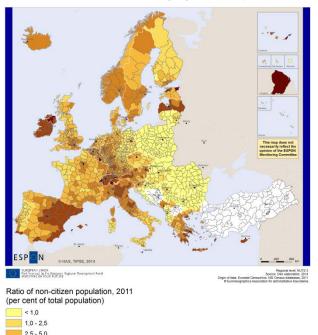

Notes: BE, EL, ESSJ, ES70, MT and NL are shown at NUTS2 level Reference population for DE is 18+ population and for 18 25-64 population Data for France corresponds to 2010

Social exclusion domains and patterns

Political participation – macroregional and urban-rural differences patterns of risks of exclusion

Ratio of non-citizen population, 2011

6,0 - 10,0 0.0 - 25.0

Part-Inanced by the European Regional Development Fund INVESTING IN YOUR FUTURE regional ever. N Source: Own elaboration Orgin of data: Eurostat Census-Jub, NSI Census databasee © EuroGeographics Association for administrative bour

Ratio of Roma people, 2011 (per cent of total population)

	< 0,25
	0,25 - 1,00
	1,00 - 1,75
	1,75 - 2,50
1	2,50 - 3,25
	3,25 <
	No data

Ratio of Roma people by declared ethnicity, 2011

Identifying spaces of exclusion

- Joining different aspects of regional analyses and synthesis of patterns in a more focused way
- Identifying spaces where social exclusion is more likely to reside

Spaces where social exclusion is more likely to reside

- Lagging regions of Eastern Europe (East Central European, Baltic and Balkan countries)
 - Mostly disadvantaged rural regions
 - Multiple risks of social exclusion in ,Earning a living' and ,Access to basic services' domains
 - Low household income and unfavourable prospects of entering labour market
 - Lower expectations for a long and healthy life and the quality of housing infrastructure
 - Greater concentrations of social groups particularly vulnerable to multiple factors of social exclusion (Roma population, elderly people or working age population with low qualification)
- Traditionally poor regions of Southern Europe
 - Multiply disadvantaged regions within countries North South differences (e.g. in Italy, Spain)
 - Risks of exclusion related to ,Earning a living' and ,Social environment'
 - Absence from the labour market, high gender gaps in labour market participation
 - Ageing of population, bigger household size
 - Culturally and traditionally determined factors; potential vulnerabilities are largely softened by family relations – growing burden due to the economic crisis ("new poverty")

Spaces where social exclusion is more likely to reside

- Urban neighbourhoods in Western Europe
 - Vulnerability to different aspects of ,Earning a living' and ,Social Environment'
 - Higher rates of unemployment
 - Ageing population, higher rates of lone parent households
 - Immigration of the poor (from Eastern and Southern European countries or outside the continent)
 - Low labour market status and educational attainment
 - Poor housing conditions
 - Lower perspectives in political participation
- Peripheries in Northern and Western Europe
 - Border regions, coastal areas, but mainly remote regions which are far from urban and economic centres
 - Inadequate accessibility of basic services
 - Higher ratios of low qualified people
 - Potential lack of adequate housing conditions
 - Social and economic problems
 - Outmigration of active age population caused by the lack of employment opportunities in the local labour market » higher rates of inactivity and old age dependency
 - Higher costs of establishment and maintenance of many services

Pilot model for a synthetic SE index

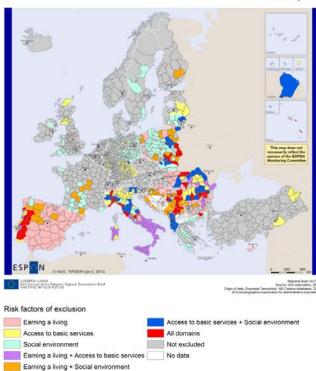

- After generalisation and synthesis of information an attempt of confirmation of results by quantification
- Instead of several proxy variables a standardised complex variable for a synthetic representation of domains
- Indicators representing each dimensions of domains (except Political participation with one dimension/indicator) are classified by a threshold after normalization – identification of regions with higher risk of exclusion
- Counting up the cases when a region can be regarded as excluded per domains (1 of 2, 2 of 2 etc.)
- Mapping all cases of exclusion according to cross-European and within-country patterns
- Representing different geographies of social exclusion on one map

Pilot model for a synthetic SE index

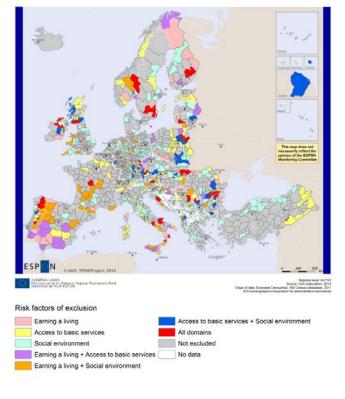

Cross-European patterns

Within-country patterns

Risk factors of social exclusion in Europe

Risk factors of social exclusion in Europe

Policy implications – patterns of exclusion

- Some aspects of exclusion (social and political dimensions) are underrepresented in policy related measures, documents
- Issue of scale
 - Cross-European and within-country patterns
 - Data availability at lower scales
- Geography matters clear spatial patterns of social exclusion
 - Macro scale differences
 - Urban rural, core periphery patterns
 - Geographic split of countries
- Complex patterns of social exclusion different domains of exclusion imply different scales and geographies

Policy implications – effects of economic crisis

- Comparison of 2001 and 2011 data information on changes over time (and on indirectly the impact of economic crisis)
 - Long-term positive changes in access to services (qualification, housing, life expectancy), changing structure of population (ageing)
 - Direct effects of crisis in earning a living growth of unemployment (long-term, youth), inactivity, in-work poverty
 - Budget cut-backs, austerity measures affecting education, health services (reduction); long-term effects on social environment
- Geographies of crisis effects
 - Mediterranean Europe and East Central European countries were hit more by the crisis
 - Deepening of existing inequalities peripheral, disadvantaged, (NMS) rural regions vs. more resilient core areas
- Migration trends
 - Changing migration patterns opportunity of work, better earnings (directions: from Mediterranean and East Central European countries to West and North)
 - Outmigration of young (active, qualified) people from remote and rural areas
